PROFESSIONAL SUMMARY

Software Engineering student with practical experience in full software development lifecycle (SDLC), Agile/Scrum methodologies, and software testing. Proficient in requirements analysis, system design, development, debugging, unit testing, integration testing, and deployment.

EDUCATION

Jaypee University of Engineering and Technology <i>Bachelor's of Technology in Computer Science Engineering</i>	July 2023 – Present Guna, MP
Mata Kasturi Devi Senior Secondary School <i>Higher Secondary Certificate (CBSE)</i>	2022 India

EXPERIENCE

Software Development Intern <i>Consilio Intelligence Research Lab</i>	May 2025 – August 2025 Hybrid, Noida
• Worked within an Agile/Scrum development environment, actively participating in sprint planning, daily stand-ups, code reviews, and iterative releases to resolve multi-device compatibility. • Improved code maintainability and performance by implementing modular architecture and applying refactoring best practices, reducing overall code complexity by 20%. • Executed unit, functional, and regression testing to ensure software reliability and reduce defects. • Applied systematic debugging, root cause analysis, and test-driven development (TDD) practices to enhance software quality, stability, and maintainability.	

PROJECTS

Secure Stack Academy – OWASP Top 10	Link
• Developed a full-stack cybersecurity learning platform implementing OWASP Top 10 vulnerability labs using Node.js, Express, SQLite, and JavaScript. • Designed a dual-mode lab system (vulnerable vs secure) enabling real-time code comparison and hands-on ethical hacking practice • Implemented authentication, role-based access control, and secure database architecture to simulate real world vulnerabilities such as SQL injection, broken access control, and cryptographic failures, etc.	
Threat Guard: Files & URL Security Analysis Platform	Link
• Developed Threat Guard, a document threat detection system using React (frontend) and Python Flask (backend) with RESTful architecture. • Built a rule-based detection engine in Python for pattern matching and malware signature identification. • Generated detailed scan reports including matched rules, severity classification, and file metadata (SHA-256, MD5 hash, entropy analysis) • Designed responsive UI with dark/light theme support and optimized performance for scalable document processing.	

TECHNICAL SKILLS

Languages: C++, C, Python, Java, MySQL
Frameworks & Tools: Flask, Authentication & Authorization
Dev Tools: Android Studio, Antigravity, Git, GitHub
Databases: Firebase, SQLite, MySQL
Core Concepts: Object Oriented Programming (OOPs), Operating System, Computer Networks
Development Practices: Agile/Scrum, Secure SDLC, Code Optimization, Debugging, Secure SDTL

ACHIEVEMENTS

Certifications: Advanced DSA Expert (2026) – TakeUForward+
Extracurricular: Joint Secretary, College Literary Wing | Design and Content Head (3×) for the college annual magazine
